Restriction Requirement:

Restriction to one of the following inventions is required under 35 U.S.C. 121:

I. Claims 1-9 and 11-17, drawn to fusion proteins comprising two β and one α subunits of a glycoprotein hormone, nucleic acids encoding such, and recombinant expression of such, classified in class 435, subclass 69.7.

10

II. Claim 10, drawn to antibodies, classified in class 530, subclass 387.9.

The inventions are distinct, each from the other because:

The proteins of Invention I are related to the antibodies of Invention II by virtue of being the cognate antigen, necessary for the production of the antibodies. Although the protein and antibody are related due to the necessary steric complementarity of the two, they are distinct inventions because they are physically and functionally distinct chemical entities, and because the protein can be used another and materially different process from the use for production of the antibody, such as in a pharmaceutical composition in its own right.

15

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification and recognized divergent subject matter, restriction for examination purposes as indicated is proper.

20

A telephone call was made to Kate Murashige on 9/21/98 to request an oral election to the above restriction requirement, but did not result in an election being made.

25

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
